BIOBARRIER®

FLOWERED MOSAICS
Trois Rivières, Québec

The municipality of Trois Rivières has for many years been involved in building flowered mosaics at numerous sites accross the city. Residents and tourists are invited to tour the city to appreciate the beauty of almost a dozen of these mosaics.

At one of the sites, tree roots of an adjacent forest were a concern. **Biobarrier** was the solution of choice to control the roots.

This site was identified to become one of the largest flowered mosaic in Three Rivers.

12" to 18" of soil was removed before the Biobarrier membrane was installed.
The membrane overlapped by 4" at the joints.

Fresh garden soil was used to cover the Biobarrier membrane.

Planting flowers to create the mosaic.

The completed project will be the envy of all citizens and tourists.
The tree roots will no longer be a nuisance to the annual creation of these beautiful flowered mosiacs.

Biobarrier's performance is <u>guaranteed</u> for 15 years, but you can expect it to last for 25 and even 30 years!
