

WEED CONTROL AT THE BASE OF TREES

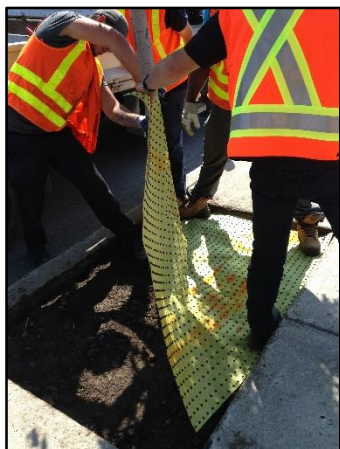

In order to control weeds at the base of trees, the municipality of Laval decided to do a pilot project on one of their boulevards and apply Typar Biobarrier in order to verify the long term performance. Approximately 100 tree base enclosures will be treated with Typar Biobarrier.

View of area prior to installation

Weeds were removed and the soil surface was lowered to 4" below the sidewalk level.

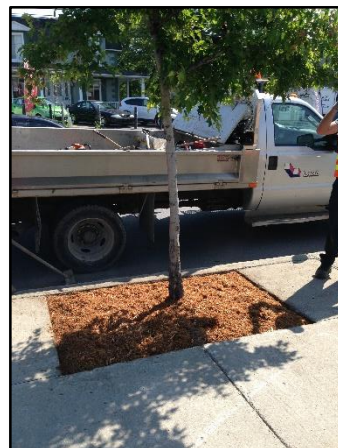

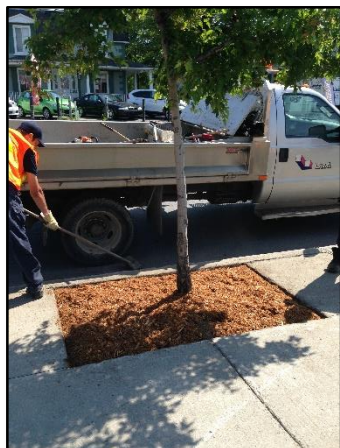

Biobarrier being set in place in the enclosure and around the tree trunk.

Plastic pegs are supplied with each roll to secure the Biobarrier in place.

***Mulch is set in place to a minimum thickness of 2" and to a maximum of 3".
Decorative stones could also be used.***

Project complete in only 20 minutes!

AFTER

BEFORE

Typar PGI, the manufacturer guarantees Biobarrier's performance for 15 years, but expect it to last 25 - 30 years.
