

BIOBARRIER®

CURBING PLANT GROWTH St. Laurent, Québec

Some plants are so hardy that they just suffocate everything around them. The City of St. Laurent had one such problem. The plants had invaded the street median, which then became unsightly and difficult to maintain. As plants, flowers and trees improve the environment and help beautify our streets, the City of St. Laurent did not want to do away with them entirely.

So, how do you limit the growth of certain plants without having to remove them completely? The answer is....**Biobarrier**.

See how Biobarrier helped the City of St. Laurent rectify their problem.....

*Center median of Marcel Laurin Blvd.
The plants were trimmed to the desired layout.*

A trench was dug around the plants.

A 15" section of Biobarrier was inserted into the trench.

The regions outside the designated area will be planted with flowers for a better, more beautiful and easier to maintain environment.

Biobarrier's performance is guaranteed for 15 years, but expect this period to last 25 and perhaps 30 years.
