BODDINGTONS

TURF PROTECTA

GRASS REINFORCEMENT

BOISBRIAND,QC

The Typar Turf Protecta was the product of choice for two entrances of the park where maintenance trucks circulate all summer damaging the grass.

Installing Typar Turf Protecta will ensure continuous growth and protection of the grass root system.

The following pictures were taken from the installation in mid-September to November 1st, which shows 90% grass coverage of Typar Turf Protecta reinforcement.

Park main entrance.

Turf Protecta and anchor bars.

Turf Protecta installation.

Soil and the grass seeds were spread over the Turf Protecta surface.

After 2 months growth.

The Turf Protecta areas were fenced in to allow the new grass to grow.

Complete coverage and protection with Turf Protecta.

For projects requiring stronger reinforcement for heavier circulation, please contact us.
We have a wide variety of products to service your requirements.

All TYPAR grass and ground reinforcement products are suitable for use as a source control solutions in LID and NPDES applications.
