

BODPAVE 85

GRASS REINFORCEMENT Green Alley – Three Rivers, Qc

What is BodPave® 85?

BodPave® 85 is a permeable paving system that allows a grass or gravel surface. BodPave® 85 porous pavers are designed to stabilize grass or gravel surfaces where traffic is required and where rainwater is required to permeate directly into the ground. BodPave® 85 porous paving grids easily click together creating a very strong stable surface. It is manufactured from 100% recycled plastic.

The municipality of Three Rivers decided to do a major upgrade to one of its alleys in order to designate it as a "GREEN ALLEY".

The following pictures demonstrate the job progression.

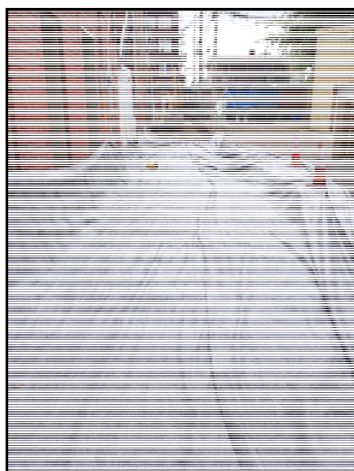

General overview of the alley.

Removal of the asphalt surface.

Installation of a geotextile.

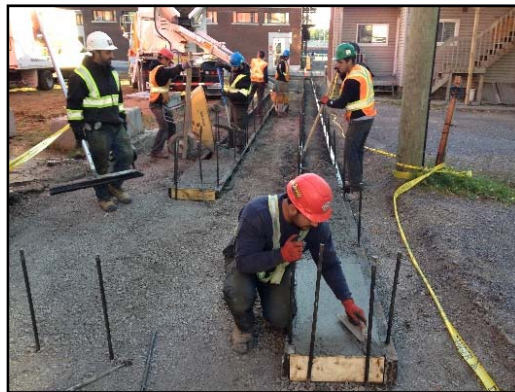

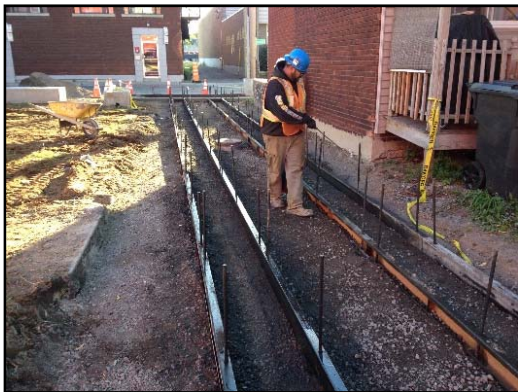

Spreading of crushed stone and stone dust.

Compacting the crushed stone and stone dust.

Poured concrete slabs for automobile circulation.

Positioning of a geo-textile covering the space around the concrete slabs.

*Installing **BODPAVE 85** with soil covering.*

In the Spring, the soil surface will be seeded with grass.
